

WILD GOOSE CHASE

Pratik Gupte •
Feb 2017

Millions of geese
migrate from the
Arctic to north -
western Europe.

Where do they go?
How do families migrate?
Why do we see patterns?

A Google Earth satellite map of the Arctic region. A yellow star marks the location of Kolguyev Island. The word "Russia" is written in yellow text on the green landmass to the east. The Barents Sea is shown in blue to the west. The map includes a legend at the bottom left indicating data sources: "Image IBCAO", "Data SIO, NOAA, U.S. Navy, NGA, GEBCO", and "Image Landsat / Copernicus". The "Google earth" logo is in the bottom right corner.
